

AXXESS COLUMN

Floor mounted, equipment management focused, the AXXESS Power Column is ideal in any setting

L I F E S P A N™

The AXXESS column manages equipment and supplies at the bedside where caregivers need it.

Convenient

- Conserves floor space with a small footprint.
- Accommodates most equipment inside the footprint of the column

Ergonomic

- Designed with smooth, soft contours, allowing for optimized working heights and reach.

Flexible & Efficient

- Staff can place equipment where it's needed.
- Open center section provides patient visibility from anywhere in the room.
- Equipment rails can be added to increase capacity.

Acuity Adaptable

- Easily reconfigured when demographics or procedures change – it's not "built in."

Expandable

- By attaching gas block accessories, medical gases may be added or relocated as clinical demand requires.

Patent No. 7,425,679

AXXESS COLUMN

Optimal Patient Care

The AXXESS Column allows the clinical team to set up the work space in any way they prefer. The slim pedestal perfectly accommodates wheeled IV poles and offers optimal equipment access.

With an ergonomic design which places services within clear and comfortable reach, AXXESS eliminates the congestion of tubes, hoses, and wires close to the patient's head. The clinical staff is free to provide optimal patient care.

Inventory and infection control may be enhanced by use of organizing clips and tools.

*Installed on a floor-mounted pedestal; **NO structural ceiling support required.***

AXXESS Column works ideally in all intensive care environments. One column can serve a single patient or up to four beds.

All utilities connect through the ceiling with single point connections provided by Lifespan.

Placement Possibilities

The AXXESS Column can be placed exactly where it will work best for the staff. With all utility lines fed through the ceiling, placement options are limitless. And expensive structural ceiling supports are not required.

Printed with soy inks on paper containing 10% post-consumer waste.
